

TAP

## Vrouwelijke metalen inslagplug

*De metalen inslagplug TAP met kraag Optie 7 en binnendraad M6 of M8 is geschikt voor het bevestigen van structurele elementen op ongescheurd beton en voor het bevestigen van diverse niet-structurele uitrustingselementen op gescheurd of ongescheurd beton. Er kan een metrische schroef of draadstang worden ingebracht.*

## Kenmerken

### Materiaal

- Elektrolytisch verzinkt staal.

### Voordelen

- Veilige en gecontroleerde uitzetting,
- Snelle installatie,
- Gereduceerde verankeringsdiepte: kortere boortijd,
- kraag voor eenvoudige installatie gelijk met het oppervlak van de ondergrond,
- Hoge prestaties in verhouding tot de verankeringsdiepte,
- Brandwerendheid R120.

## Toepassingen

### Toepassingsgebieden

#### Ideaal voor alle soorten hangende uitrustingen:

- goten, rails,
- kabelhulzen en leidingen,
- Sprinkler-bevestiging.

### Ondergrond

- gescheurd en ongescheurd beton voor niet-structurele toepassingen,
- ongescheurd beton voor structurele toepassingen,
- steen.

1. The design loads have been calculated using the partial safety factors for resistances stated in ETA-approval(s). The loading figures are valid for unreinforced concrete and reinforced concrete with a rebar spacing  $s \geq 15$  cm (any diameter) or with a rebar spacing  $s \geq 10$  cm, if the rebar diameter is 10mm or smaller.

2. The figures for shear are based on a single anchor without influence of concrete edges. For anchorages close to edges ( $c \leq \max [10 \text{ hef}; 60d]$ ) the concrete edge failure shall be checked per ETAG 001, Annex C, design method A.

3. Concrete is considered non-cracked when the tensile stress within the concrete is  $\sigma_L + \sigma_R \leq 0$ . In the absence of detailed verification  $\sigma_R = 3 \text{ N/mm}^2$  can be assumed ( $\sigma_L$  equals the tensile stress within the concrete induced by external loads, anchors loads included).

\*Not covered by ETA-18/0432
