

ABMI

Insulation holding claws

The ABMI insulation holding claws can be snapped on any EBC angle bracket for cladding. It holds the thermal insulation against the wall support in an external insulation cladding application.

Features

Materiál

- Pre-galvanised mild steel.
- 0.5 mm thickness

Vorteile

- Its shape perfectly suit the EBC bracket: these claws can be snapped on the bracket in order to hold the insulation against the support.
- it deforms in order to prevent from a backward movement after the installation
- it can be cut in half with a shear to get two half combs.

Applications

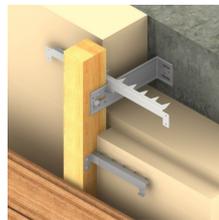

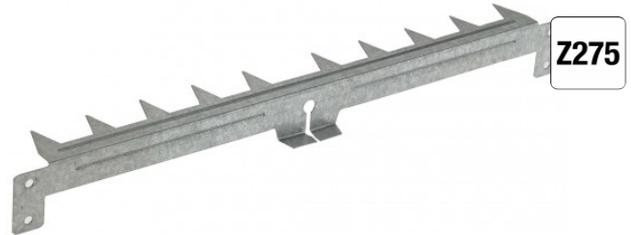

Anwendungsbereich

- Hold soft thermal insulation in external insulation cladding.

Support

Supporting member: EBC bracket or wood rafter

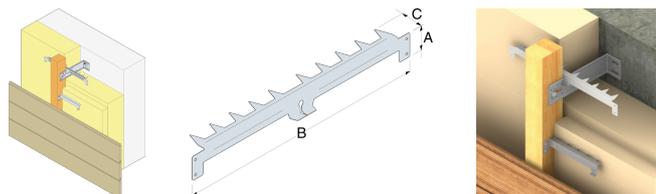

Supported member: soft insulation
