ABAI

Angle bracket for CLT

The ABAI is a bracket for static structural joints between wall and ceiling panels of laminated wood. They are separated by 12 mm thick sound insulation support.

Features

Material

- **Galvanized steel S250GD with zinc coating thickness of 20 microns**
- **Syldyn®: Polyurethane Syloer SR220**

Benefits

- Load capacity in all directions
- Saving time and cost to build, because there is no need for additional sound insulation
- Reduces sound transmission
- More living space because of additional sound insulation
- A positive impact on the indoor environment, greater wind resistance, due to isolation SYLODYN along the outer walls

Applications

Applicatons

Supporting member:

Plywood boards

Supported member:

Plywood boards

Scope

- The ABAI soundproofing angles are used for connections between wall and ceiling elements made of plywood boards
- The connection to the base plate by means of Simpson Strong-Tie® special screws. The MOABAI insertion device is to be used
- The connections can be made on one side or with opposing angle brackets.

Design:

For the overlap of the action must be proven:

$$\sum \left(\frac{F_{i,d}}{R_{i,d}} \right)^2 \leq 1$$

Wood to concrete - 1 bracket per
connection

References	Simplified product capacities - Timber to timber – Full nailing											
	Number of Fasteners				Simplified characteristic capacities - Timber C24 - 2 angle brackets per connection [kN]				Slip modulus k_{ser} for load duration			
	Joist		Flange B		$R_{1,k}$	$R_{2/3,k}$	$R_{4,k}$	$R_{5,k}$	$R_{1,k}$	$R_{2/3,k}$	$R_{4,k}$	$R_{5,k}$
	Qty	Type	Qty	Type								
ABAI105	8	CNA4,0x60	3	SDS25600	2.2	2.2	3.7	2.6	0.8	0.68	1.16	0.8

The published characteristic capacity is based on short term load duration and service class 2 according to EC5 (EN 1995) – $k_{mod} = 0.9$. For other load duration and service class, please refer to the ETA to get more accurate capacities
for load combination:

$$\sum \left(\frac{F_{i,d}}{R_{i,d}} \right)^2 \leq 1$$
