Universal bracket

Features

Material

Steel quality:

S250GD + Z275 according to DIN EN10346

Corrosion protection:

275 g / m galvanized on both sides 20mm

Benefits

- **Easy connection of intersecting wooden parts**

Applications

Applicable materials

Wood / wood joints, particularly in intersecting roof structures.

Application area

- **UNI96 connector for attaching transitions wood for smaller buildings, for example. Carports, pergolas**
 - **UNI100 and UNI130 be used for attaching beams transitions to smaller wooden houses**
 - **UNI190 are for connecting eg. Purlins are used to support the rafters to Purlin**
- Values partial nailing**

e og b indsættes i mm.

Hvis åsen er forhindret i at rotere, vil bæreevnen $R_{1,k}$ i en samling med kun et beslag være halvdelen af bæreevnen i en samling med to beslag. Hvis åsen kan rotere kan bæreevnen af UNI190 beregnes, se ETA på vores hjemmeside www.strongtie.dk

Ved anbringelse af to beslag UNI190 overfor hinanden på hver sin side af en ås (dvs. ikke diagonalt), kan alle bæreevner **pr. beslag** ved denne samling findes i ETA for 1 beslag pr. samling. Bæreevnen for F_1 fås ved at sætte f lig nul. Bæreevnen for F_2 og F_3 er uændrede. For F_4 og F_5 anvendes den mindste værdi af F_4 og F_5 .
