

Wieszak belki stworzony z myślą o zastosowaniu z elementami z drewna klejonego warstwowo. Może być stosowany w połączeniu do drewna lub betonu. Produkowany w dużych rozmiarach.

[ETA-06/0270](#)

WŁAŚCIWOŚCI

Materiał

Gatunek Stali:

- S250GD
- Grubość blachy 4,0 mm

Ochrona antykorozyjna:

- Ocynkowane ogniowo metodą Sendzimira Z 275 g/m² (20 µm)

Zalety

- Uproszczony montaż za pomocą śrub ciesielskich
- Duże rozmiary i zakres zastosowań

ZASTOSOWANIE

Zastosowanie

Do połączenia elementów drewnianych o szerokościach 100 – 220 mm z elementem głównym wykonanym z drewna, materiałów drewnopochodnych lub betonem.

Belka - Belka

Element główny:

- drewno lite, drewno kompozytowe, drewno klejone warstwowo, beton.

Element drugorzędny:

- drewno lite, drewno kompozytowe, drewno klejone warstwowo.

Produkty przedstawione w niniejszej tabeli nie są jedynymi dostępnymi rozmiarami. Produkty w innych rozmiarach mogą być wykonane na zlecenie.

**Śruby M16 klasy 4.6 i 5.8

Belka drugorzędna GL24

* Patrz kotwy Simpson Strong-Tie. Typowymi rozwiązaniami są kotwy mechaniczne WA lub BOAXII, chemiczne AT-HP, SET-XP. Należy uwzględnić typ materiału bazowego, rozstawy i odległości od krawędzi. Prezentowane nośności nie uwzględniają potencjalnie mniejszych rozstawów lub odległości od krawędzi. Jeżeli zachodzi potrzeba, projektant musi przeprowadzić sprawdzenie oddzielnie. Dostępny jest darmowy program Anchor Designer.

MONTAŻ

Łączniki

Mocowanie do drewna:

- Do belki głównej i drugorzędnej stosować śruby $\varnothing 16$

Mocowanie do betonu:

- Do belki głównej stosować kotwy M16 (WA-M16-110/5)
- Do belki drugorzędnej stosować śruby $\varnothing 16$
